Model 213
Hot Beverage
Merchandiser.

More options and a redesigned selector panel make it extremely user-friendly.

Our Model 213 does more for both you and your customer.

We've added numerous new features in developing our Model 213 hot beverage merchandiser... like a redesigned selector panel and adjustable cup rings which let you vend any style cup. Best of all, the Model 213 is backed by the leader in hot beverage merchandisers, Automatic Products, the people who build the most innovative and reliable machines in the industry.

All New Selector Panel

The Model 213 offers 7 hot beverage selections, many of which give your customer a choice of strong, medium or mild strengths. It also allows for two cup size pricing, providing the flexibility to price each individual hot beverage selection. We've also added tactile feedback (buttons that click when pushed) to help reassure the purchaser their selection has been entered.

Two Cup Size Capability.

Profitability is enhanced by the choice of two different cup sizes — standard on the Model 213. Your customers can choose the size they desire, which typically increases sales.

Adjustable Cup Rings.

Our adjustable cup rings vend any style cup from 7 oz. up to 12 oz., including insulated foam cups.

Fixed Filter Base Brewer.

The Model 213 has a twelve ounce brewer with a fixed filter base that features fewer moving parts to maximize reliability and minimize service calls.

More Canister Rack Configurations.

You have the choice of four basic canister rack configurations for added flexibility. For example, the Model 213 can vend up to 3 different soluble gourmet coffees (SGC).

▲ Our more user-friendly selector panel (shown in Apollo styling) allows for up to 1,450 different selections in various strengths of flavor.

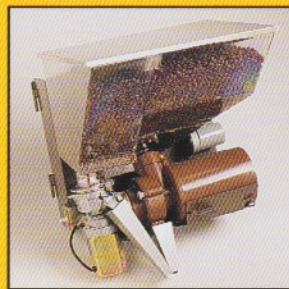

The cup well and cup sensor allow customers to use their own personal coffee mugs.

▲ Two cup sizes give your customers a choice, and increases sales.

▲ Our bean grinder set the industry standard for durability, reliability, and grind consistency.

Additional Standard Features.

Our Model 213 has five prime selections including our exclusive Custom Select Coffee (each with three programmable strengths), plus selections for hot chocolate and SGC or soup. Other standard features include easy-to-use **color coded selection buttons**, **artificial sweetener choices**, **easy-to-change selection labels**, a new **high-velocity exhaust feature**, **individual pricing** for all selections, and user-friendly **scrolling display**.

Flexible Pricing is also standard. The Model 213 allows for: separate discount pricing, separate debit card pricing, and programmable winner mode (for promotional opportunities). There's also a **free vend feature** (no money needed) for situations where desired.

Popular Options. In addition to all the customer-attracting features above, this machine can accommodate **fresh brewed tea**, **espresso**, **whipped soluble gourmet coffee**, and a "use your own mug" option — with or without a **discount feature**. There is also **Apollo Styling** and standard 24 volt or 110 volt capability for the coin mechanism or validator. Other options include a slow return vend door dampener and an **MIS information retrieval** and upload/download module.
